The screenshot shows the BIO-EQUIP website homepage. At the top, there is a navigation bar with links for Home, Suppliers, Products, News, Events and Expos, and About Us. A search bar is located below the navigation bar. The main content area features a large banner for Thermo Fisher Scientific on the left, a list of industry updates in the center, and a product directory on the right. The product directory is organized into categories such as Centrifuges, Incubators/Drying ovens, Microscopes, PCR, and Spectrum/HPLC/GC/MS. A callout box highlights the 'eA1 top banner' with dimensions 468x60 pixels and a price of CNY 2,000/month. Another callout box highlights the 'eA2 right banner' with dimensions 250x200 pixels and a price of CNY 3,000/month. A third callout box highlights the 'eA3 brand feature' with dimensions 120x50 pixels and a price of CNY 2,00/month. The bottom of the page features a grid of logos for various suppliers, including ZHCHENG, Xutemp, Cosmobread, Luxiangyi Centrifuge, Boxun, SYCLON, Jintub, Auzone, BioTNT, Heal Force, JET BIOFIL, BMT, and ESCO.

### TTP Labtech Delivers Hit-Picking B

Clicks: 39

*mosquito<sup>®</sup> X1 (nanolitre pipettor) provides accurate high-throughput screening*

Cambridge, UK (19<sup>th</sup> March 2012) – An exciting technological collaboration integrating TTP Labtech's mosquito<sup>®</sup> X1 automated nanolitre pipettor with a well-known microplate mover has been set up, bringing an innovative hit-picking solution to the University of Michigan. This fully automated system is being utilised by the University's High Throughput Screening (HTS) Core, Centre for Chemical Genomics, to automate the selection and processing of compound hits from screens, using their 150,000 strong library.

The mosquito X1 and microplate mover automated platform is fully controlled by the mosquito ChemPicker software. The unique design of the mosquito nanolitre pipettes allows for multiple aliquots of compound from each pipette, rapidly preparing serial dilution and dose response plates for secondary screens.

*mosquito<sup>®</sup> X1 automated nanolitre pipettor*

"The mosquito X1 instrument has proven revolutionary in increasing the throughput of our hit selection service" said Martha Larsen, Director of HTS, University of Michigan. She continued, "It is particularly important to us that the mosquito X1 can cherry-pick the compounds from the storage plates, and that the instrument can perform dose response dilutions for use in our secondary screening stage. Before we purchased the mosquito we prepared dose response 384-well plates by hand and had to limit screens to 200 compounds a time. With the mosquito X1 we have been able to significantly increase our screening rate and throughput."

In addition, the ability of the mosquito X1 to dry spot compounds from the source plates overcomes the commonly encountered issues caused by aliquoting labile molecules in aqueous solutions in advance of the screening experiment. This is particularly beneficial when setting up biological assays which require lengthy set up times, such as the time dependant transient transfections often used by this HTS facility.

Joby Jenkins, Product Manager, TTP Labtech commented: "The mosquito X1 instrument provides the speed and efficiency required for HTS facilities. We have worked closely with the HTS Core to provide a platform that is optimised to meet their specific needs. The ability to transfer compounds within a complex, high density microplate format, while avoiding cross-contamination, can boost the throughput of any screening service. Coupling the mosquito X1 instrument with a microplate mover creates a platform that provides a level of walk-away confidence and greater workflow efficiency. We are delighted that this system has had such a positive effect on their workflow practices."

For more information about the mosquito<sup>®</sup> X1 from TTP Labtech please visit: [www.ttplabtech.com/mosquito](http://www.ttplabtech.com/mosquito).

**About TTP Labtech Limited**  
Based near Cambridge, UK, TTP Labtech creates, designs and manufactures robust, reliable and easy-to-use instrumentation, offering life scientists better tools and techniques, simplifying complex operations and saving time and material costs.

We provide state-of-the-art solutions developed for specific product areas including: cell-based screening (acumen<sup>®</sup>, mirrorball<sup>®</sup>); sample management (comPOUND<sup>®</sup>); low volume liquid handling (mosquito<sup>®</sup>) and the management of analytical automation (lab2lab).

TTP Labtech is owned by its employees, and our continued drive to innovate combines cutting edge science with first rate engineering, manufacturing and outstanding customer support.

Recently reviewed product

Established since 1998, Bio-Equip is a leading website for lab equipments, reagents, consumables and bio services. Our users come from different fields like life science, medical research, pharmaceutical, biotechnology, modern agriculture, food safety and environment monitoring. Bio-Equip offer users a complete product directory which involves 158 product ranges among lab equipments, reagents, consumables, lab animals, bio services, cell lines, bio software and books.

Serving users through two websites, [www.bio-equip.com](http://www.bio-equip.com) (Chinese) and [www.bio-equip.cn](http://www.bio-equip.cn) (English), we own over 20,000 registered suppliers and more than 500,000 pieces of product and technical service information with details of product description, price, sample downloading, technical articles and videos. The resourceful online information accelerate product & service searching process, offer convenience to users from research institutions, universities, hospitals, centers for disease control, pharmaceutical factories, inspection and quarantine bureau as well as forensic centers. Generally, Bio-Equip promote the development of bioresearch and bio-industry!

Welcome to visit Bio-Equip and cooperate with us for a brilliant future!
